

RANGER-2

SILENCER

For 5.56mm rifles and carbines.

Designed to be compact and lightweight, the RANGER-2 is optimized for CQC scenarios. Replacing the standard flash hider, the simple thread mounting system provides rigidity and strength for increased accuracy while minimizing the repeatable zero-shift. Extreme durability is achieved by CNC automated fusion welding every high-temperature component used in its construction – giving the RANGER-2 longevity and making it an excellent value. The back-pressure lowering design of the silencer aids in shooter comfort, reduces weapon fouling, and minimizes cyclic rate increase. The elimination approximately of 95% of the muzzle report nullifies the need for ear protection, preserves field communications, and masks the location of the user.

Physical Specifications:

Weight:	15 oz.
Length:	6 in.
Length added to weapon:	4.25 in.
Diameter:	1.5 in.
Finish:	Flat Black
Materials:	304SS
Attachment:	.5-28 Class-3

Performance Specifications:

Sound Reduction:	32dB
Velocity:	equal to unsuppressed
Accuracy:	improved from unsuppressed
